

Surface Mining Reclamation and Enforcement, Interior

§ 820.2

(i) Not pose a threat of pollution to surface water, and

(ii) Comply with the requirements of §§ 816.41 and 816.42 of this chapter.

§ 819.17 Auger mining: Subsidence protection.

Auger mining shall be conducted in accordance with the requirements of § 817.121 (a) and (c) of this chapter.

§ 819.19 Auger mining: Backfilling and grading.

(a) *General.* Auger mining shall be conducted in accordance with the backfilling and grading requirements of §§ 816.102 and 816.104 through 816.106 of this chapter.

(b) *Remining.* Where auger mining operations affect previously mined areas that were not reclaimed to the standards of this chapter and the volume of all reasonably available spoil is demonstrated in writing to the regulatory authority to be insufficient to completely backfill the highwall, the highwall shall be eliminated to the maximum extent technically practical in accordance with the following criteria:

(1) The person who conducts the auger mining operation shall demonstrate to the regulatory authority that the backfill, designed by a qualified registered professional engineer, has a minimum static safety factor for the stability of the backfill of at least 1.3.

(2) All spoil generated by the auger mining operation and any associated surface coal mining and reclamation operation, and any other reasonably available spoil shall be used to backfill the area. Reasonably available spoil shall include spoil generated by the mining operation and other spoil located in the permit area that is accessible and available for use and that when rehandled will not cause a hazard to the public safety or significant damage to the environment. For this purpose, the permit area shall include spoil in the immediate vicinity of the auger mining operation.

(3) The coal seam mined shall be covered with a minimum of 4 feet of nonacid-, nontoxic-forming material and the backfill graded to a slope which is compatible with the approved

postmining land use and which provides adequate drainage and long-term stability.

(4) Any remnant of the highwall shall be stable and not pose a hazard to the public health and safety or to the environment.

(5) Spoil placed on the outslope during previous mining operations shall not be disturbed if such disturbances will cause instability of the remaining spoil or otherwise increase the hazard to the public health and safety or to the environment.

§ 819.21 Auger mining: Protection of underground mining.

Auger holes shall not extend closer than 500 feet (measured horizontally) to any abandoned or active underground mine workings, except as approved in accordance with § 816.79 of this chapter.

PART 820—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—ANTHRACITE MINES IN PENNSYLVANIA

Sec.

820.1 Scope.

820.2 Objective.

820.11 Performance standards: Anthracite mines in Pennsylvania.

AUTHORITY: Secs. 102, 201, 501, 503, 504, 529, Pub. L. 95-97, 91 Stat. 448, 449, 467, 470, 471, 514 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1279).

§ 820.1 Scope.

This part sets forth environmental protection performance standards for anthracite surface coal mining and reclamation operations in Pennsylvania.

[44 FR 15449, Mar. 13, 1979]

§ 820.2 Objective.

This part implements subsection 529(a) of the Act, which requires the Secretary to adopt special performance standards for anthracite mines regulated by special environmental protection performance standards of a State as of the date of enactment of the Act.

[44 FR 15449, Mar. 13, 1979]
